Online videos demand upraised after Covid-19 affected nations implemented social isolation.

Amazon Prime Video announced this Friday that will reduce video quality in streaming platforms during Covid-19's quarantine.

The multi-service company joins YouTube and Netflix's initiative to face demand uprising and avoid network collapse. Online videos demand upraised after Covid-19 affected nations implemented social isolation. This circumstance leads to higher streaming content consumption.

In an official communication, Amazon Prime Video representatives affirmed: "We are working with local authorities and internet service providers where necessary to help mitigate any network congestion, including in Europe, where we have already started to reduce the bit rate."

Amazon Prime Video will extent internationally the temporal disposition, in contrast with YouTube and Netflix that will only apply the palliative solution to European Union subscribers. Thierry Breton, European Commissioner for Internal Market and Industry, requested entertainment consortiums to ease users' access to their content by lowing video resolution to standard quality.
